## ABSTRACT OF THE DISCLOSURE

A wrist support device for supporting a wrist of a user while the user is using a computer mouse. The wrist support device includes a base member being designed for being selectively coupled to the computer mouse. A cushion member is coupled to the base member whereby the cushion member extends upwardly from the base member. The cushion member is designed for supporting the wrist of the user to reduce the stress on the wrist of the user when a hand of the user is positioned on the computer mouse.
